3.3 – Data Flow Diagram

Data Flow Diagram (DFD):

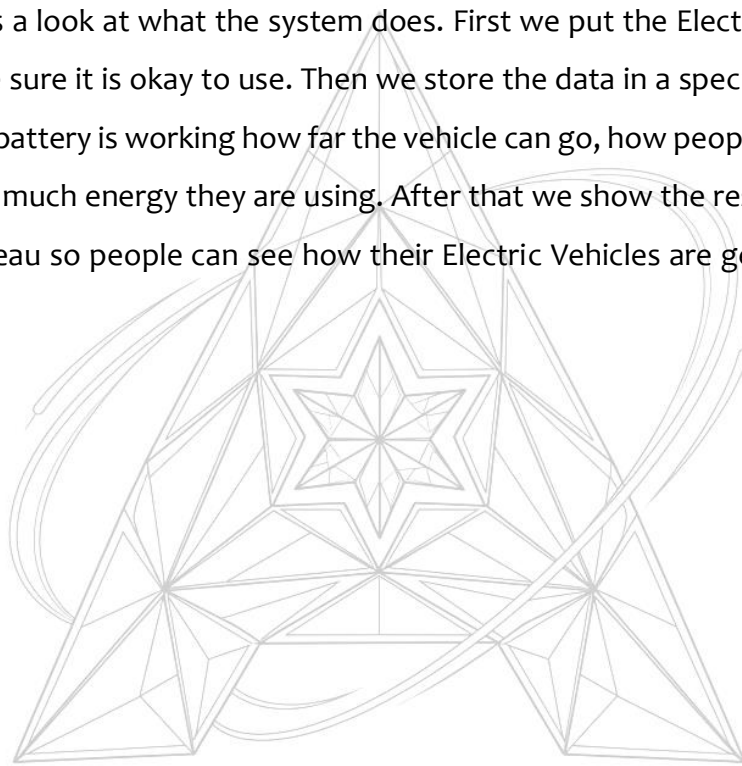

The Data Flow Diagram is like a map that shows how data moves around in the Electric Vehicle Charge and Range Analysis system. We get Electric Vehicle data from lots of places and then we make sure it is clean and ready to use. After that we look at the data to see things like how the battery is charged how far the vehicle can go, how people charge their vehicles

and how much energy they use. We use Tableau to make pictures and charts of the results so Electric Vehicle owners and people who study them and make them can see what is going on and make decisions.

DFD Level-1

The Level-1 DFD is a look at what the system does. First we put the Electric Vehicle data into the system. Make sure it is okay to use. Then we store the data in a special place and look at it to see how the battery is working how far the vehicle can go, how people are charging their vehicles and how much energy they are using. After that we show the results in pictures and charts using Tableau so people can see how their Electric Vehicles are get ideas about what to do.
